

Rehabilitation of Route 59 Bridge over South Pascack Road

Department of Transportation

Town of Clarkstown and Village of Spring Valley, Rockland County

OPEN HOUSE

Tuesday, March 24, 2026

6:30 - 8 p.m.

Pascack Community Center,
87 New Clarkstown Road, Nanuet, NY 10954

PROJECT OVERVIEW

The project will replace steel girders and the concrete bridge deck, as well as bridge railing and pedestrian fencing. Abutments and wingwalls will be repaired.

PROJECT BENEFITS

Rehabilitating the bridge will bring it into compliance with modern design standards, extend the bridge's life and reduce current maintenance costs. It will also allow the bridge to carry all legal loads, including tractor trailers, and remove the current weight rating.

The project will reinforce a critical bridge that provides a direct connection between Interstate 287 and a busy commercial stretch of Route 59.

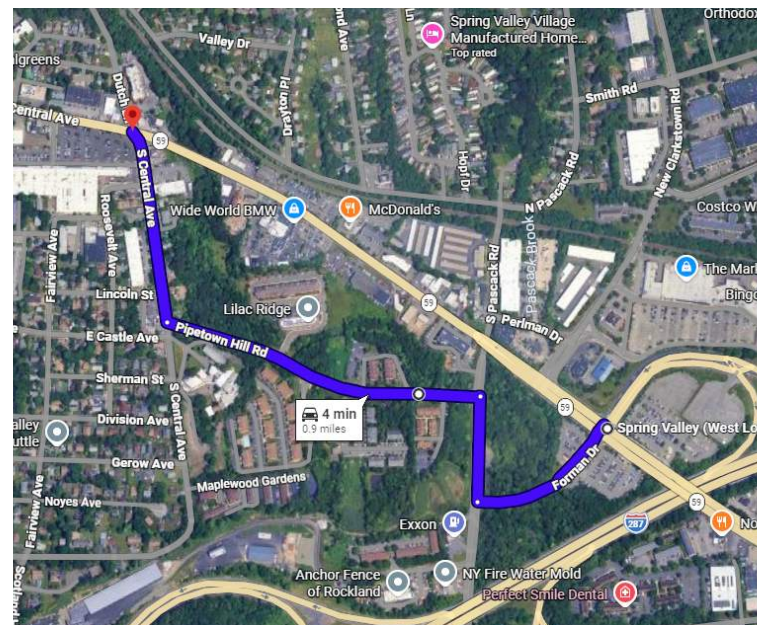

MINIMIZING CONSTRUCTION IMPACTS

The plan involves closing the bridge to traffic during construction to minimize the project's impact on the community and to complete the project more quickly. The detour utilizes Forman Drive, South Pascack Road, Pipetown Hill Road and South Central Avenue. Businesses along that stretch of Route 59 will remain open and accessible.

Taxi service will shuttle pedestrians around the construction area.

PROJECT SCHEDULE

Site work will begin in the spring, with the bridge closure and detour implementation anticipated to begin on or about May 21. The bridge is expected to reopen to traffic before Labor Day.
